Site_2: ECORI; The library used for sequencing was a
sublibrary derived from a human retina cDNA library.
Inserts from retina cDNA library DNA were isolated,
cleaved with Tsp5091, size selected, and cloned into lamda
gt10. Individual plaques were arrayed and used as
templates for ECR amplification and these PCR products
were used for sequencing."

// Order="Organization" and Saptems / Orde="Organization" and Saptems / Orde="Organization" or organization with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHDU, and fetal heart NbHH19W) were mixed, and se circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-348479. and 484488-489479."

Mean 36.486; Variance 158.060; scale 0.231 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A brk (breast tumor kinase) cDNA fragment was used to screen a 20MA library prepared from human breast tumor cell line T-47D. 2 CDNAs were isolated. The slightly longer clone lambda-t2 (Q81189) encoded brk (R63088), which was identified as a novel putative non-receptor kinase of use as a prognostic/diagnostic of breast

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      405 irsnkfsiksdvwsfgillyeiitygkmpysgmtgaqviqmlaqnyrlpqpsncpqqfyn 464
                                                  Claim 3; Fig 5; 60pp; English.

Claim 3; Fig 5; 60pp; English.

Claim 3; Fig 5; 60pp; English.

PTK genes were identified using two sets of degenerative

Oligonuclectide primers: a first set which amplifies all pTK DNA
segments (049743-44), and a second set which amplifies highly
conserved sequences present in the catalytic domain of the c-kit
subgroup of pTKs (049745-46). The pTK genes identified are described
in 049747-57 and R41897-02.

The LpTKs are expressed in lymphocytic cells, as well as
megakaryocytic cells. The partial and full-length LpTK2 gene
sequences are given in 049749 and 049754 respectively. The
protein sequence corresp. to 049749 is claimed (claim 7) and
stated as given in the specification, however is missing from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             45 hyfvalfdygartaedlsfragdklgvldtlhegwwfarhlekrrdgssgqlggyipsny 104

The DNA encoding a portion or (more preferably) the entire pp60 c-src polypeptide (Given in Q46687) is used to transform endothelial cells. Transformed cells produce increased amounts of pp60 c-src and have improved therapeutic properties. They migrate at faster rates than non-transformed counterparts; have an enhanced ability to
kinase(s) - also activate chimeric proteins of kinase extracellular domain and Ig constant domain, useful for studying, and therapeutic modulation of, cell growth and differentiation

Disclosure: Page 56-58; In3pps.

DNA probes based on protein tyrosine-kinase (pTK) sequences were use to screen cDNA libraries to identify novel pTK genes. A LepTK2 gene (T03097) was isolated from lymphocytic and megakaryocytic cell libraries. The encoded novel pTK, LpTK2 (R85929), shows homology to known pTKs, and can be used to design drugs that modulate pTK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    105 vaedrslqaepwffgaigrsdaekqllysenktgsfliresesqkgefslsvlḋgavvkh

The DNA encoding a portion or (more preferably) the entire pp60 c-src polypeptide (Given in Q46688) is used to transform endothelial have improved therapeutic properties. They migrate at faster rates than non-transformed counterparts; have an enhanced ability to inhibit the formation of thrombi and/or dissolve thrombi once they have formed and exhibit reduced mononuclear cell adhesion. They can also be used to improve the success of surgical procedures such as comment angloplasty, heart bypass surgery, vessel graft and stent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            143 iqaeewyfgkitrreserlllnpenprgtflvresettkgayclsvsdfdnakglnvkhy

Claim 1; Fig 4.2; 15pp; Japanese.
The sequence consists of the N-terminal amino acids of the beta-
galactosidase gene fused with the lck gene. It is produced by
E.coli transformed with a recombinant vector (see Q13983). It is
useful for producing an antibody specifically immunoreactive with
recognise lck gene-derived polypeptide in T cells. The antibody may

therapy Disclosure; Fig 5B; 40pp; English. Disclosure; Fig 5B; 40pp; English. The human gene encoding this protein is closely related to but distinct from the abl proto-oncogene and is a member of the tyrosine kinase encoding family of genes. Arg is expressed as two transcripts. By analogy with c-abl, the alternative 5' arg sequences have been designated A and B (014937) and it is assumed that they are joined

The human gene encoding this protein is closely related to but distinct from the abl proto-oncogene and is a member of the tyrosine kinase encoding family of genes. Arg is expressed as two transcripts. By analogy with c-abl, the alternative 5' arg sequences have been designated A (Q14936) and B and it is assumed that they are joined to the arg second exon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            109 pnlfvalydfvasgdntlsitkgeklrvlgyngngewse-vrsknaggwvpsnylt-pv- 165

Three-dimensional conformation of enzyme-affectors - using computer modelling design of specific affectors - using computer modelling design of specific affector complex computer modelling design of enzyme-affector complex Example; Pages 51-52; 115pp; English.

Example; Pages 51-52; 115pp; English.

CC The inventors provide a crystal structure of cAMP-dependent protein kinase (CAPK) with its catalytic subunit intact. The crystals contain a bound inhibitor peptide (PRI(5-24)) which comprises a fragment of the heat stable protein kinase inhibitors (PRI). PRI(5-24) includes the consensus feature common to all peptide substrates and inhibitors of CAPK. In addition it contains other features that convey unique high affinity binding characteristics. From an analysis of PRI(5-24) a template is derived from which all other protein kinases can be modelled and from which other inhibitors can be designed. For example, to design specific inhibitors of a first protein kinases comprises comprises obtaining the cresidues present in most protein kinases complex, generating a model of the protein kinase corresp. to points of contact for CAPK, and of the protein complex, examining the amino acids in the first contact for CAPK and PRI(5-24), and designing an inhibitor of the first protein kinase. In the example, the inventors use this methodology to design an inhibitor for pp60(c-src) which is the protein residues are incorporated into the appropriate position virues. The invariant residues in p60(c-src) which is protein kinases. Once the template is in place and the catalytic protein kinases. Once the template is in place and the catalytic interaction when the protein the example of the invariant residues present in most contains the correspondent of the invariant residues are incorporated into the appropriate position in the catalytic interaction when the protein residues are incorporated into the appropriate position in the catalytic interaction when the protein protein kinases. Once the template is in place and the catalytic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytoplasmic tyrosine kinase BMX and related DNA - useful to stimulate haematopoietic cell growth.
Disclosure; Page 23-25; 40pp; English.
Cytoplasmic tyrosine kinase ITK (R94535) is selectively expressed at certain stages of T-cell development. The sequences of ITK and 2 other members of a newly identified non-receptor tyrosine kinase family, BTK (R94534) and TEC (R94536), and of the Drosophila Src28C tyrosine kinase (R94538), were compared with that of novel cytoplasmic tyrosine kinase BMX (see also R94533). Close homology was found.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            220 QDVWERPHSEFALGRKLGEGYFGEVWEGLWLGSLPVAIKVIKSANWKLTDLAKEIQTLKG

NR VATORIANIC VYROSINE Kinase BMX and related DNA - useful to stimulate haematopoietic cell growth.

PS Disclosure; Page 21-23; 40pp; English.

CC Vatoplasmic tyrosine kinase BTK (R04534) is selectively expressed cc at certain stages of B-cell development. The sequences of BTK cc and 2 other members of a newly identified non-receptor tyrosine cc kinase family, ITK (R04535) and TEC (R04538), were compared with that of novel cytoplasmic tyrosine kinase BMX (see also R04533).

CC Drosophila STC2RC tyrosine kinase BMX (see also R04533).

CC close homology was found.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytoplasmic tyrosine kinase BMX and related DNA - useful to stimulate haematopoietic cell growth.

Disclosure; Page 28-29; 40pp; English.

The anino acid sequence (R94538) of Drosophila Src28C tyrosine kinase was compared with the sequences of 3 members of a newly-identified non-receptor tyrosine kinase family, BTK (R94535), and TEC (R94536), and with novel human cytoplasmic tyrosine kinase BMX (see also R94533), Close homology was found.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Cytoplasmic tyrosine kinase and antibody recognising it - for screening chemical substances for tyrosine kinase inhibitory or activative for use as cancer therapy claim 1; Page 41-44; 58pp; English.

A cytoplasmic tyrosine kinase which has enhanced expression in connection with blood cell differentiation has been isolated from the human UT-7 blood cell line. The DNA sequences and antibodies raised against the enzyme, are usful for screening agents for inhibiting or activating activity on the tyrosine kinase, for use as anticancer agents. Sequence 507 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 894; DB 13; Length 507;
